

New Release from BoMetals: Introducing Our QD3 Basket...

We've expanded our line of load transfer baskets so that you now have a choice of flat plate dowels. In addition to our popular diamond baskets we now have the QD3 tapered dowel baskets.

The QD3's alternating tapered dowel assembly provides efficient load transfer in concrete floor or pavement joints with a consistent amount of steel on each joint.

Made in the USA, with unmatched quality and delivered with reliability.

We can provide exactly what you need on your next job. If you give us the opportunity to win the work with you, we will give you the customer service that has defined BoMetals as one of the most outstanding in the business.

What to expect from BoMetals and the QD3

- Tapered load plate: 3/8", 1/2" and 3/4" saw cut from hot rolled steel plate meeting ASTM A 36 for acceptable tolerances
- American made - consistent manufacturing and superior products
- Competitive pricing
- Exceptional customer service

Our enhanced design features include:

- Plate shape allows for the most lateral and horizontal movement with maximum strength at the center of the joint preventing horizontal stress accumulation at the joint
- Creates stable horizontal and vertical plate alignment with a fully-welded basket assembly fabricated to match the joint layout.
- The QD3 assembly's engineered performance meets the industry (ACI 360, Guide to Design of Slabs-on-Ground) recommended requirement, i.e. total differential deflection between slab panels to .01 inches (.25 mm) for hard wheels and .02 inches (.50 mm) for air cushioned rubber tires.
